Wachito

5.0 out of 5 stars Best tool for a technician or Mechanic

June 23, 2019

Verified Purchase

Compare this to the encyclopedia of car scanners. First thing first, this thing has so many features is insane. You can connect it to the internet so you are able to update the data base for updates errors and codes. You can also research directly to the internet the definition of a code (it will take you to google where it will show you any examples)

Features:

It will give you a reading of your battery voltage

It will automatically scan your car based on your vin number, and if your car is old you can manually input the VIN number and it will show your vehicle.

It will give you a report of all the diagnosis that you can directly email to yourself or someone.

You can also take screenshots.

I will tell you this all my friends who are mechanics have already ask me to let them borrow it because is so accurate.

5.0 out of 5 stars Better than Launch crp123 and ancil fx2000

August 6, 2019

[Verified Purchase](#)

Compared with Launch crp123 and ancil fx2000, this launch crp123x is better. The screen was nice and displayed clear. What impressed me most, was that the unit was combined the AutoVIN technology and wifi update, being the best option available in the market in terms of speed, performance, data analysis and data transfer. It immediately identified the car, and I didn't have to enter the year, make, engine, etc. manually, which allowed me to easily read and retrieve diagnostic trouble codes, to perform a quick scan. And I was getting tired of making numerous trips to mechanics every time when the SRS light blinked and stayed on. To my satisfaction, this scan tool could reset that error light then I could end up saving time and money. And it also had the feature of updating via Wi-Fi. Then I can use its newest software in a simple way, so great. Keeping the tool up to date is important to ensure that getting the best software coverage. Overall, I was and am satisfied. :-)

5.0 out of 5 stars A much appreciated upgrade!

June 21, 2019

[Verified Purchase](#)

Thank you launch! This is a customer coming from the original crp 123. I've had it for years it did just the main thing for me. It would give me any engine trouble codes. Thankfully, I decided to upgrade and I must admit. I absolutely love it. Just the operating system is a major upgrade. ANDROID! You gotta live anything they put Android on. On top of that I've had cars that the 123 would only read 3 out of the 4 criteria. But now, my God, it reads everything, and some more. Boy does it do more. Who would have thought this scanner would connect to my wifi just as easy as it would to my phone. Who would have thought upgrading the firmware is just as easy as well. When you turn on the device you get a little notification telling you if such and in a matter of minutes it done! Wirelessly! Can you believe it! In my personal car I have after market music that has a very high power draw and because of that I constantly check my voltage. Can you believe the scanner helps with that as well! It shows battery voltage using a graph. I don't know how again to say how please I am with this upgrade. Lauch, you've done a great job and for those looking for a scanner. LOOK NO FUTHER! THIS IS IT. From diy to the professionals.

C. Montoya

4.0 out of 5 stars An impressive modern scan tool

May 26, 2019

[Verified Purchase](#)

Update: The obd connector has deformed slightly making it an annoyance. It is soft plastic so you have to reshape it before trying to plug in. 2000 Jeep Grand Cherokee did not auto detect and unit malfunctioned. Even after entering the vin it still did not work. I had to close out and go into obd instead. It entered a false mileage and location on the report as well. Still a great unit but loses a star.

The CRP123x has some really nice features going for it. Set up is super simple, the tool walks you through everything. The upgrade feature makes this tool special, your notified of pending updates and they are free for life. It has a strong built-in lithium battery and a screen saver which helps it last a long time between charges.

Pros:
Easy user interface
Touchscreen
Lifetime updates
Wi-fi connectivity
Strong battery

Cons:
Boot time
Protective covering

This scan tool covers the four main systems very well, I was able to pull some codes that my Creader VII+ did not. Even the user manual was well done, it's not perfect but a major improvement over most. I like the fact it has built-in storage, I'm showing 2.7gb available. Having wi-fi connected allows you to send a health report and screenshots which is helpful. The tool took me to the web to look up information on trouble codes smoothly. It does everything advertised pretty well and the battery voltage graph is nice. The embroidered nylon storage case is also a great touch.

The tool takes approximately 46 seconds to boot and auto detect, which seems a bit long but might be improved on a future update. The health report automatically generates and you have to exit out in order to use other functions. This took me a few minutes to figure out, you have to quit and hit the home button. The protective cover seems firm and I don't like the red color. Let's face it, we get dirty, greasy hands and a black color would hide this better. Launch included a feedback section on the tool which tells me they care about what we think.

All in all, I really like this tool. I keep this in my trunk to use when I'm out or helping a friend. If you're a DIYer or aspiring technician I think this this would be a good purchase. Having lifetime updates helps future proof the tool and adds value to the purchase. I have already had two updates in under a week so far.

Jasmine

5.0 out of 5 stars It is definitely a good purchase

May 30, 2019

[Verified Purchase](#)

It is professional and powerful scan tool . It has more features than this,base on Android system ,very convenient for operation. besides that ,upgrade software support always is a problem that bother me for long time ,now ,it solved perfectly by this product .all I need to do just click the upgrade button ,waiting for a moment ,it is all done . it come with mostly comment reset function ,saving me lot money and time. it easily and quickly pull the diagnostic report out from system ,even can be printable by sending a email . Overall, it's be a quality code scanner at a fair price - definitely worth a try if you need to unravel what's going on in your car.

5.0 out of 5 stars I'm happy to report that this obd2 scanner works just fine

June 22, 2019

[Verified Purchase](#)

This obd2 scanner is essential for anyone that likes working on their own vehicle maintenance, or even someone who likes to be more informed when consulting a professional mechanic. The price is affordable, and the using experience is much better than the old version Launch CRP123, the touch screen, autovin functions is very user-friendly, and most importantly, the updating process is very easy, connected with wifi, one click update, much easier than the crp123, i do not need to find an old-fashion pc with windows 7 for updating, besides, the diagnosing process is much faster. It is easy to use, and I don't need to find a power source for charging it. By plugging it in the OBD port and it can be powered on. Not only did this diagnostic tool provide me with the diagnostic trouble code of ABS, but it did also even offer me the code's meaning! In this way, I was able to determine what's going on with my car. If you do end up taking the vehicle to a garage for the repair, at least you will go with enough knowledge to know if you are being scammed. Overall, I highly recommend this scan tool to you!

Tom

5.0 out of 5 stars Have only used this once but, have to say I am very happy with it!

June 20, 2019

[Verified Purchase](#)

The check engine light on my car dash came on, so I took my car to see what the issue was. I was told that there would be a \$60 charge if I wanted to clear the DTC, and the cost didn't cover any labor and parts. I didn't leave because I knew that the illuminated warning light indicated some problems with my car, and if I ignored the problem, there would be more serious problems. The check engine light did actually off finally, but I cost nearly \$300. As a result, I bought the CRP123X based on many positive reviews on LAUNCH, and I was very satisfied

with this product during the first usage. After successfully connection, its Auto Vin tech allowed me to quickly identify my Nissan's detailed information. It perfectly avoided the hassle of inputting the VIN code one by one. I easily read the diagnostic trouble code – P0420 and learned that the warning light may be caused by the damage or leakage on the exhaust system. I went to the local parts store as usual, but this time, I felt confident about consulting the specific repair methods. It seemed impossible to spend tons of money on a little trouble! The diagnosis for engine, abs, srs, transmission is fast and effective. Generally speaking, a high-end diagnostic tool is essential for identifying the car's health condition anytime and anywhere, plus it is effective at avoiding being cheated by mechanics, thus paying excessive money.

5.0 out of 5 starsBigger IS Better

June 16, 2019

Verified Purchase

I also own the Launch CreaderVII+ and upon taking this CP123X out of the box, I immediately notice how much bigger the unit is over the VII+. The unit is at least double in size. The screen is very bright and easy to read. I really like how I can see the battery life just by quickly pressing the power button. Wifi upgrades is a definite plus also. I tested two vehicles with the unit, a 2004 Nissan Titan and a 2005 Chrysler Town and Country. The 123X found the VIN numbers rather quickly. I was pleasantly surprised by the speed of the unit. Another great feature that I like about this unit is the on the go battery voltage. The user interface is easy to navigate as well. You don't have to be an electronic genius to use this unit. As far as the exterior, this unit has a very rugged casing, so it is made to withstand a short drop without affecting the unit. I also like the soft pouch used for storing the unit and cabling. It would have been nice to get an update to reset oil change lights, but this is minor. I am very impressed with this diagnostic tool and have a lot of confidence in the Launch brand. I look forward to see what is next. (This review was part of a promotion by Launch.)

5.0 out of 5 stars Works great save a few dollars but this one..

June 28, 2019

Verified Purchase Early Reviewer Rewards([What's this?](#))

I have used this about six times in just the first week I got it. The auto Vin look up is very helpful. The auto update works great just connect to WiFi and I like the fact you pick what manufacturer's you want to update or you go to select all. The battery holds up well. All in all I really like Scan tool it is very handy and useful working in my vehicles as well as other people I know I am not a shop I just have good common sense, this tool has worked great so far and gave me the confidence to buy launch products again and the next one I will get will be a bi- directional. 5.0 out of 5 stars Launch CRP123X new scanner

June 20, 2019

Verified Purchase

This scanner is an update of the CRP123, it is bigger, it has a touch screen, WIFI connection, carrying case, automatic update via internet via WIFI, the vehicle selection menu is simpler due to the touch screen, in addition to its scanning of Automatic vin facilitates vehicle selection, it has new functions that the CRP123 does not have as a battery control, it is a good scanner that with new aggregations is much better than the old one, it has more vehicle brands to scan, it is a good product It can be used by professionals or amateurs.
